In the published version of our paper, there was an error in the abstract that could lead to some confusion in the interpretation of the result of the research. Specifically, a sentence stated that: “For \( l < d_i \), fluctuations show monoscaling, indicating Gaussian statistics.” This sentence is incorrect and should be replaced with the following: “For \( l < d_i \), fluctuations show monoscaling, indicating non-Gaussian, yet self-similar statistics, which suggests the absence of intermittency in that range.”
